

COVID-19 in OC Jails

Updated May 7, 2020

The Orange County Sheriff's Department has been proactive in implementing containment strategies, and has activated our communicable disease protocol to safeguard the inmates and staff at the Orange County Jail.

The Sheriff's Department is requiring enhanced medical screening for all inmates, law enforcement, and staff entering the Orange County Jail, including temperature screening prior to entering any OC Jail facility. In addition, all incoming inmates are quarantined for up to 14 days to limit exposure to the current inmate population.

Numbers fluctuate day-by-day due to changes in patient condition(s). Data is gathered daily at one point in time.

- * Number of inmates positive and negative includes symptomatic inmates and asymptomatic inmates.
- ** Number of tests administered is a cumulative total of positive, negative and pending tests.
- *** Number of inmates recovered indicates the number of inmates that tested positive for COVID-19, were isolated, provided medical treatment, recovered and have been rehoused.

Medical Isolation/Quarantine Location as of May 7, 2020

This indicates the housing location of the inmate when they are in medical isolation/quarantine due to a positive COVID-19 test. This is not necessarily the housing location where the inmate was when he/she became symptomatic.
